

Medicare

Group 11

Abdul Rahim Bin Mohamed Suhaimi 0131352

Jonathan Ng Zhu Xiang 0132477

Calvin Goh Kai Boon 0132005

Introduction

01

The increased use of mobile technologies

People are almost always on their phones

02

Digitalisation of services are more common

03

A plan to develop a mobile app

-

Project Objective

What is the main purpose of this mobile app ?

01

Provide easy access medical assistance

All within reach with a push of a button (i.e. calling an ambulance, schedule appointment)

02

Health selfcare/Education at the fingertips

- Users - encouraged/motivated to monitor their own health
- Educate self with essential medical knowledge

03

Easy access to consultations with professionals

No need for long waiting time at hospitals

Functions

General

01

Login

Allows the general user to login into their account

02

Register

Create a new account for themselves

Admin

01

Add Doctors

The admin - main responsibility to add doctors to the system

02

Manage Users

Search and check the details of any user in the system

Users (Patients)

01

Browse Medical Professionals

Browse and search for any medical professional available on the system

02

Health Data

Key in and track health data of the patient (i.e. Weight, height, blood pressure).

03

Book Appointment

Book an appointment with any medical professional after browsing.

Users (Patients)

04

Educational Wiki

Browse and read latest educational articles on various medical topics

05

Call Ambulance

Allow users to call for an emergency ambulance.

Doctors

01

Browse Appointments

View and read appointments created by patients

02

Start Virtual Consultation

Create a virtual consultation for the appointed time

03

Set prescriptions

Note down prescriptions for patients for any past consultation once settled

Tools (Software Technologies)

Languages

The programming languages involved in the implementation of the application

Java

Object-oriented language used
to develop the system's
backend and middleend

XML

The Extensible Markup
Language is a markup language
that describes the structure of
the page (Frontend)

Development tools

The tools that facilitate the development of the system

Android Studio

Complete Android
development Intergrated
Development Environment
(IDE)

Figma

High fidelity prototyping tool to
produce a complete mock-up
of the system

Github

A remote repository allows the
development to be tracked and
collaborated on remotely

Database

The Database Management System manages the system's database

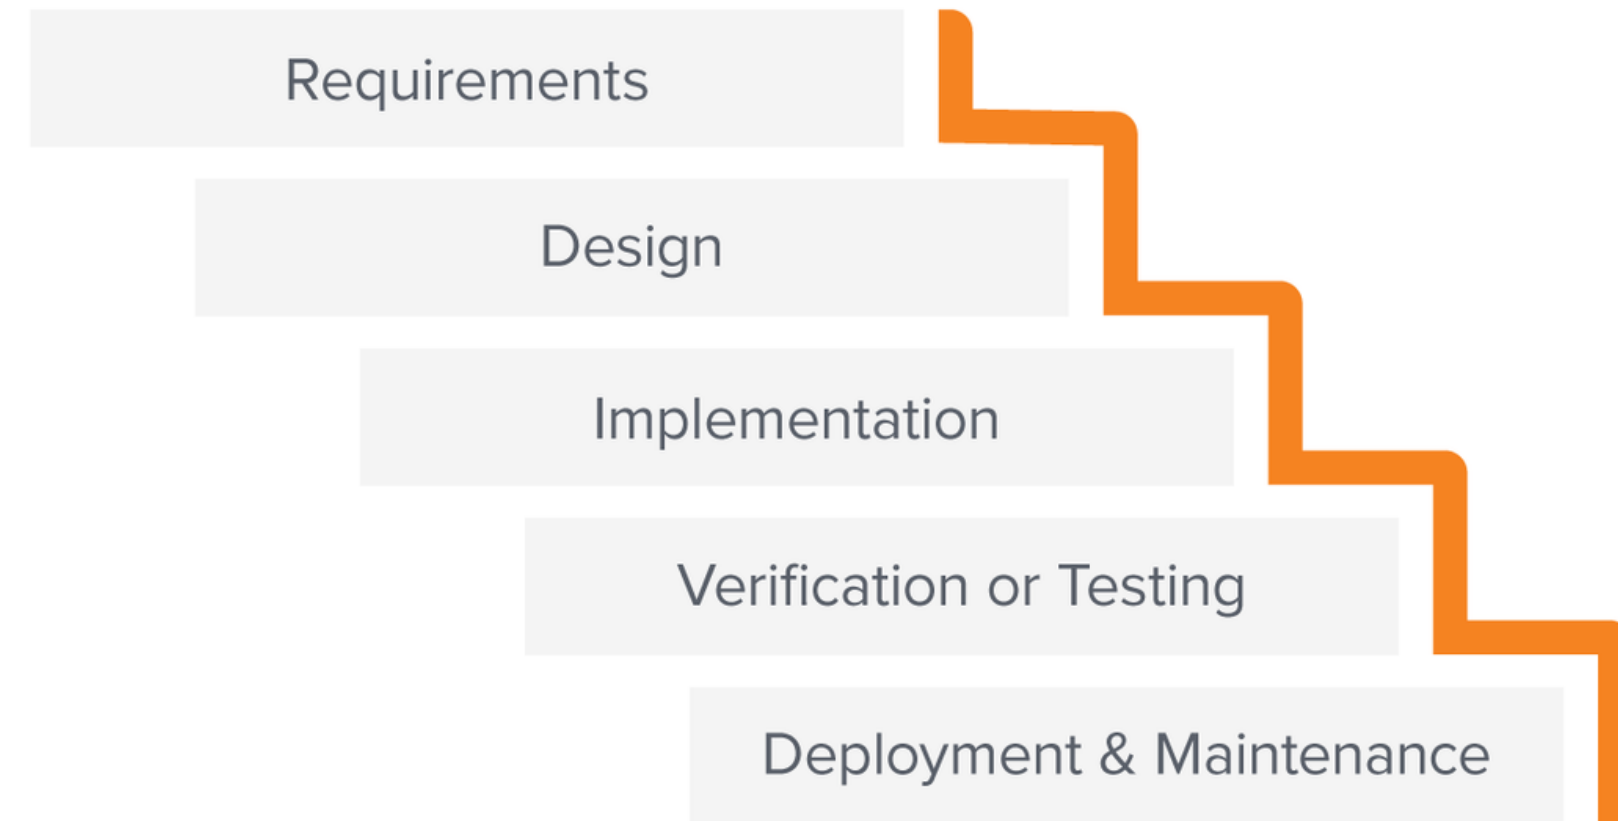

Firestore

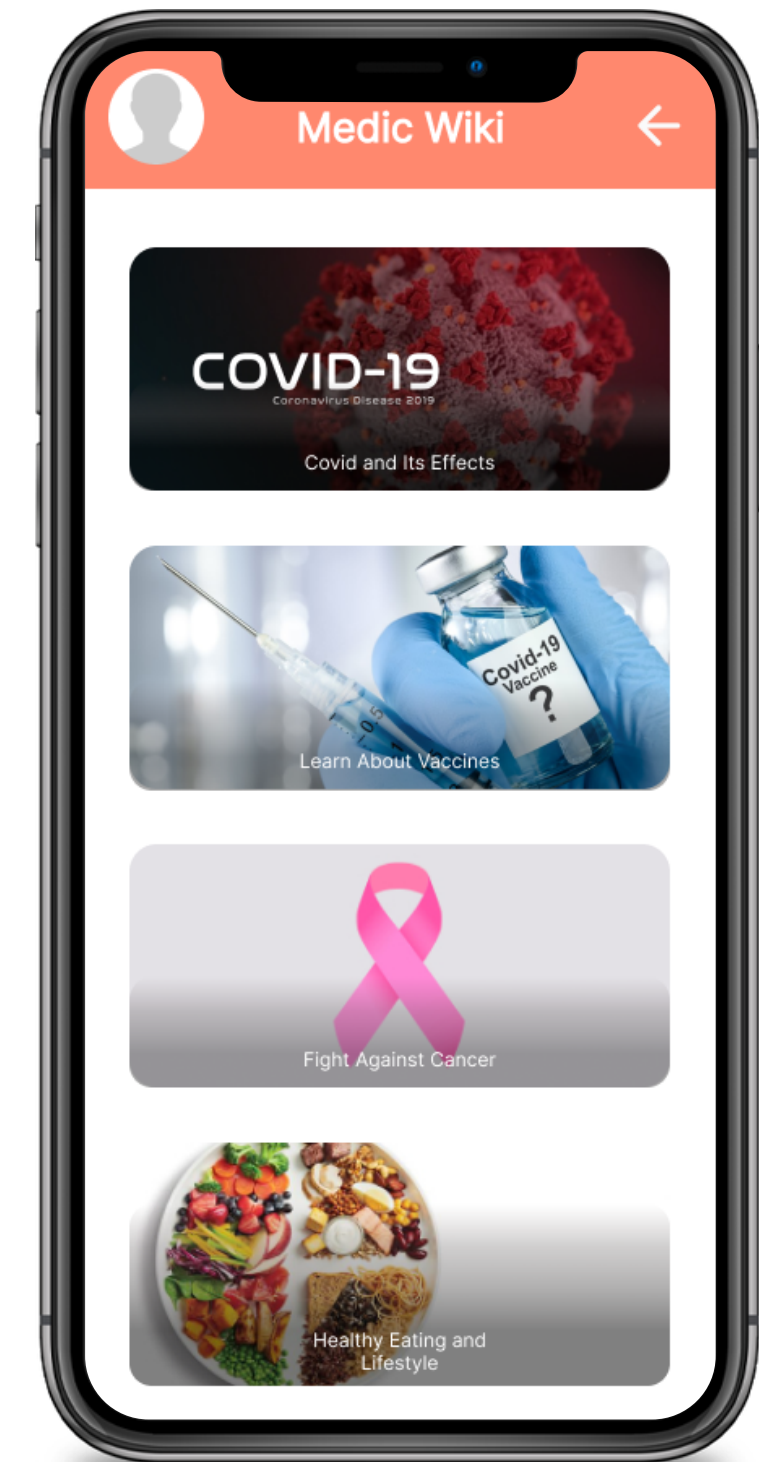

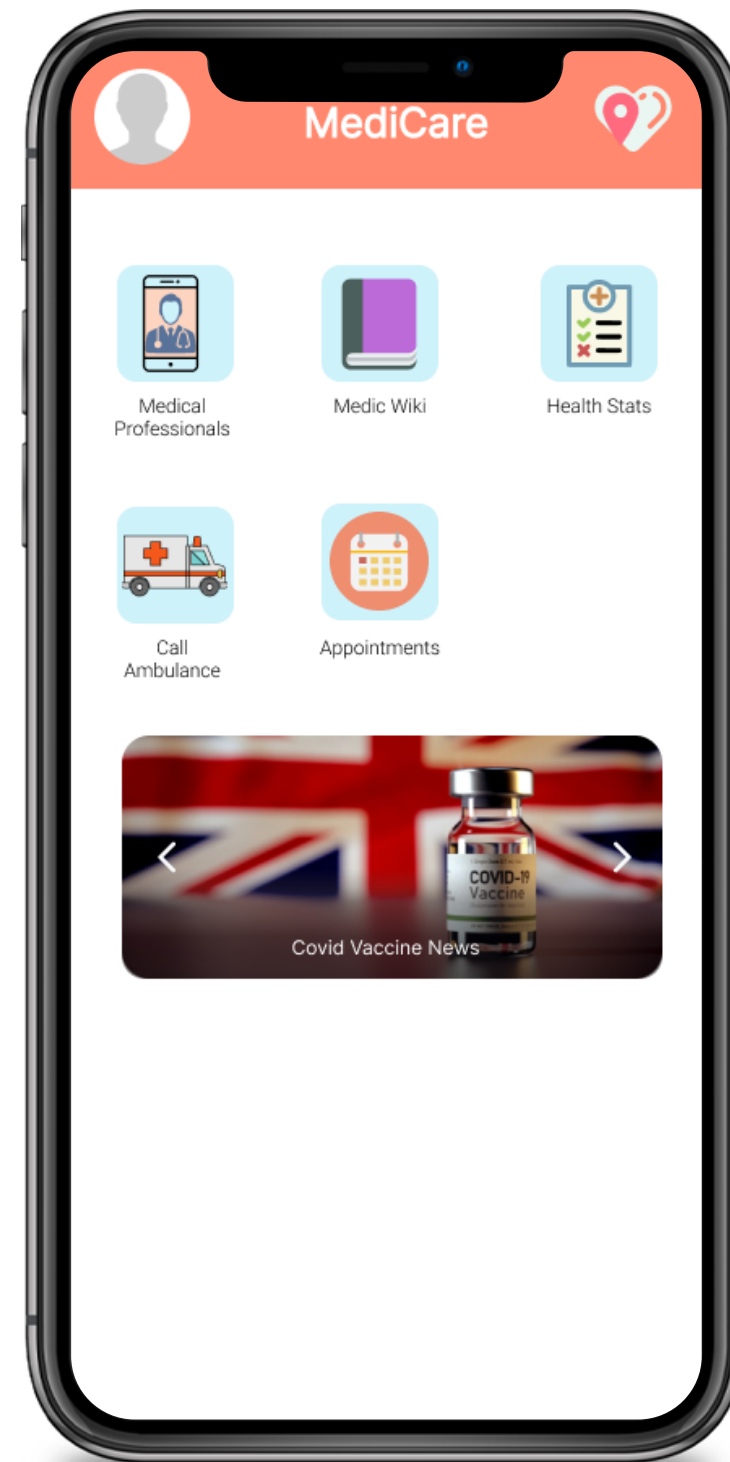

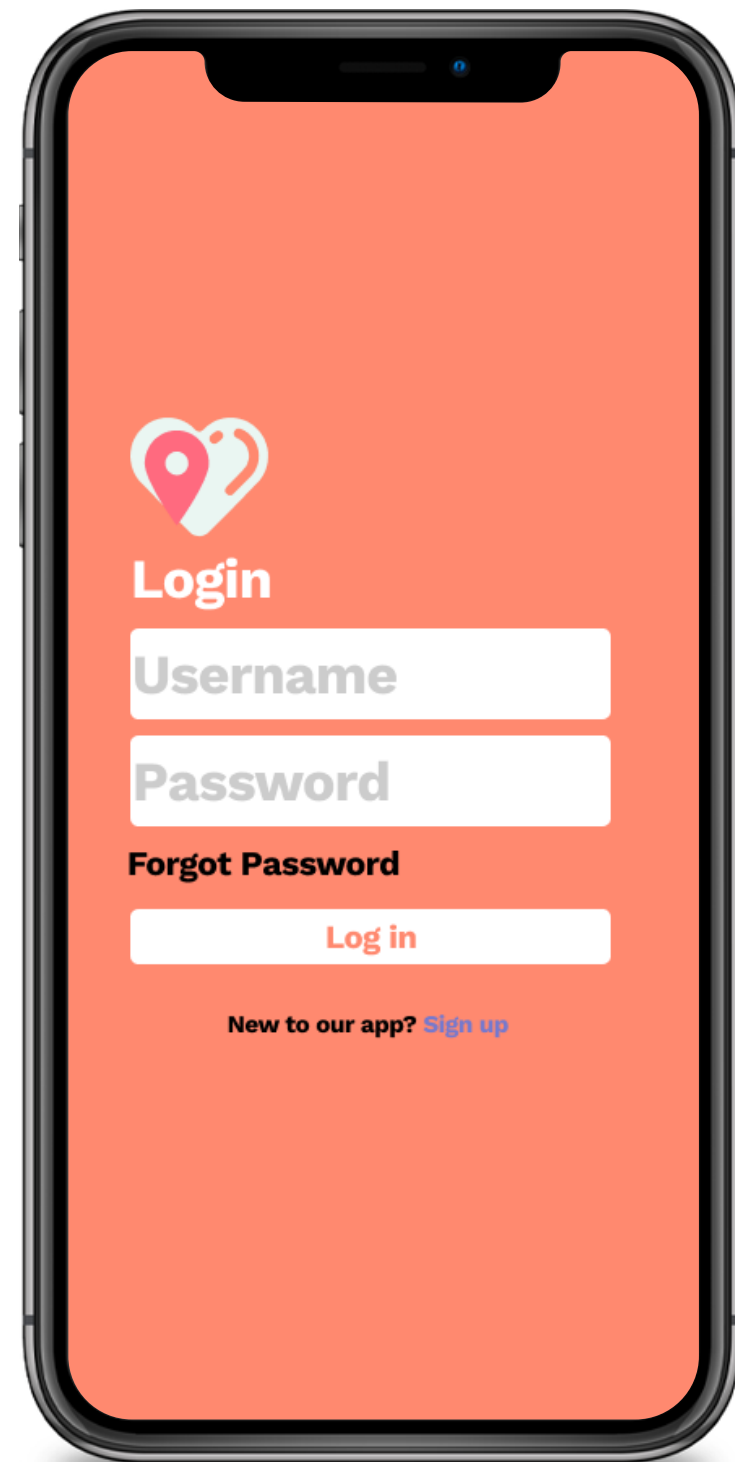

The Firestore Realtime Database is a cloud-hosted NoSQL database that lets you store and sync data between your users in realtime.

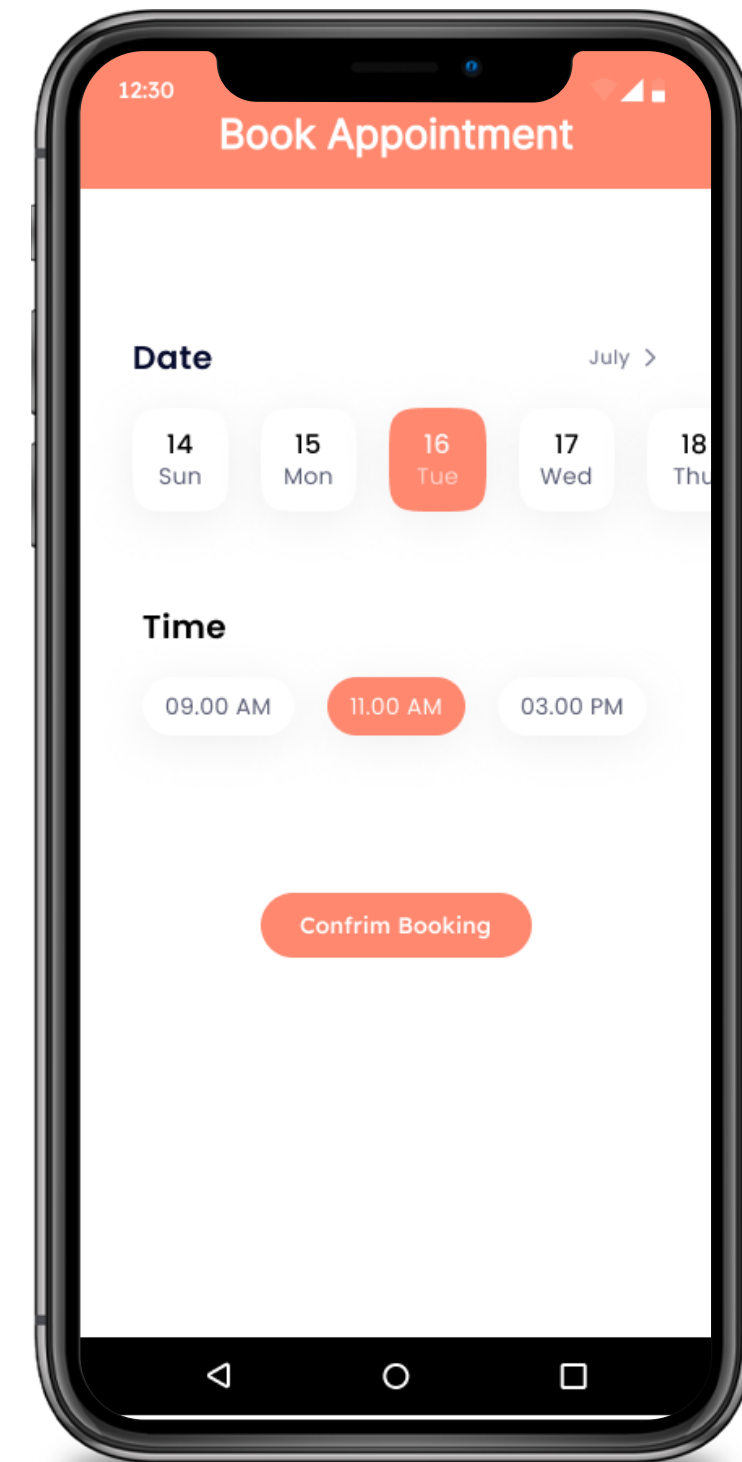

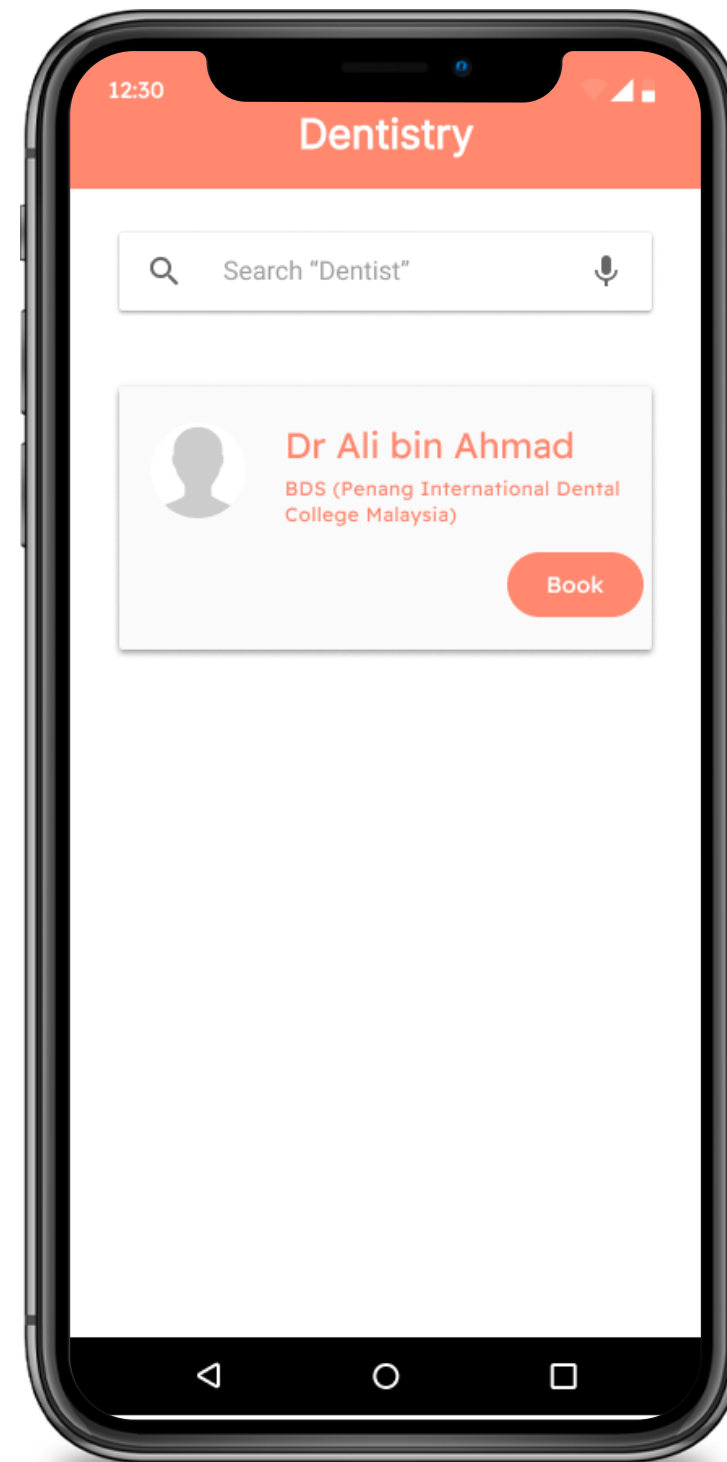

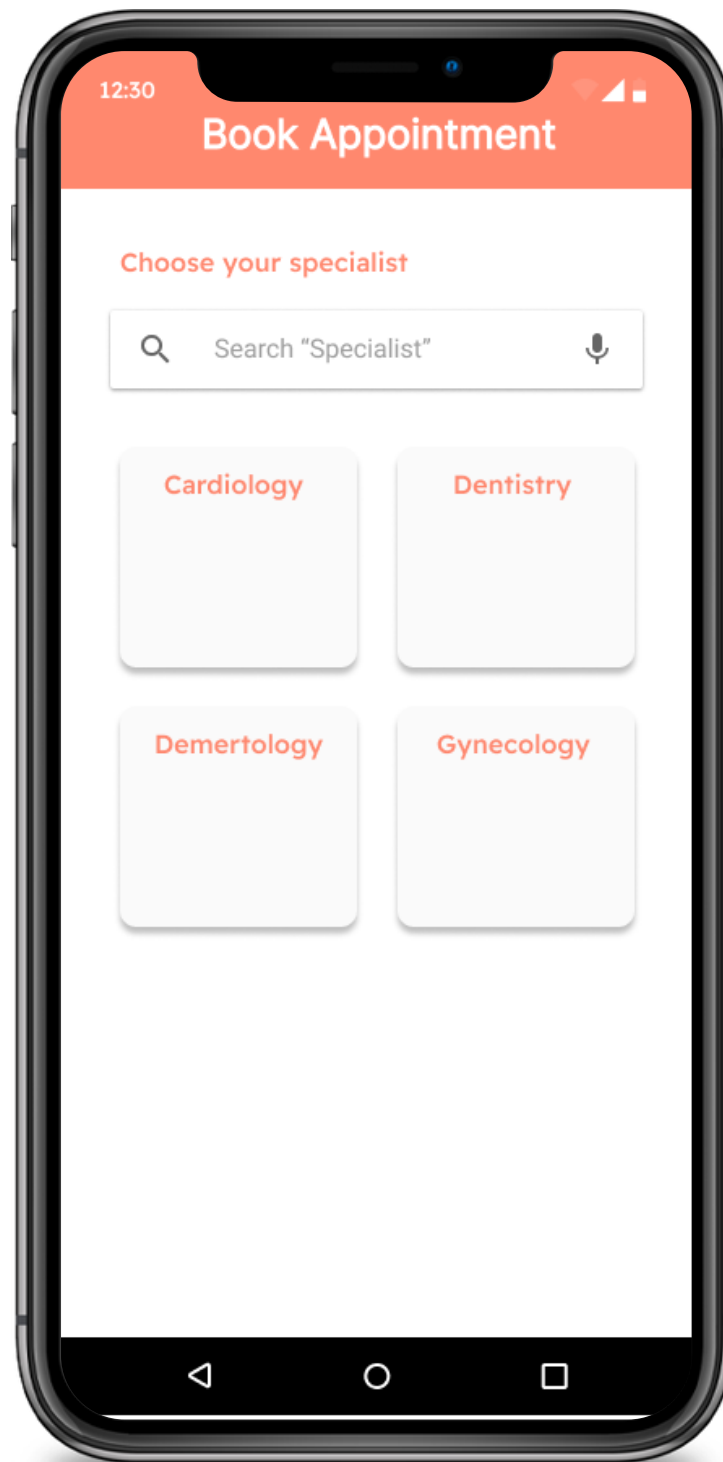

Methodology

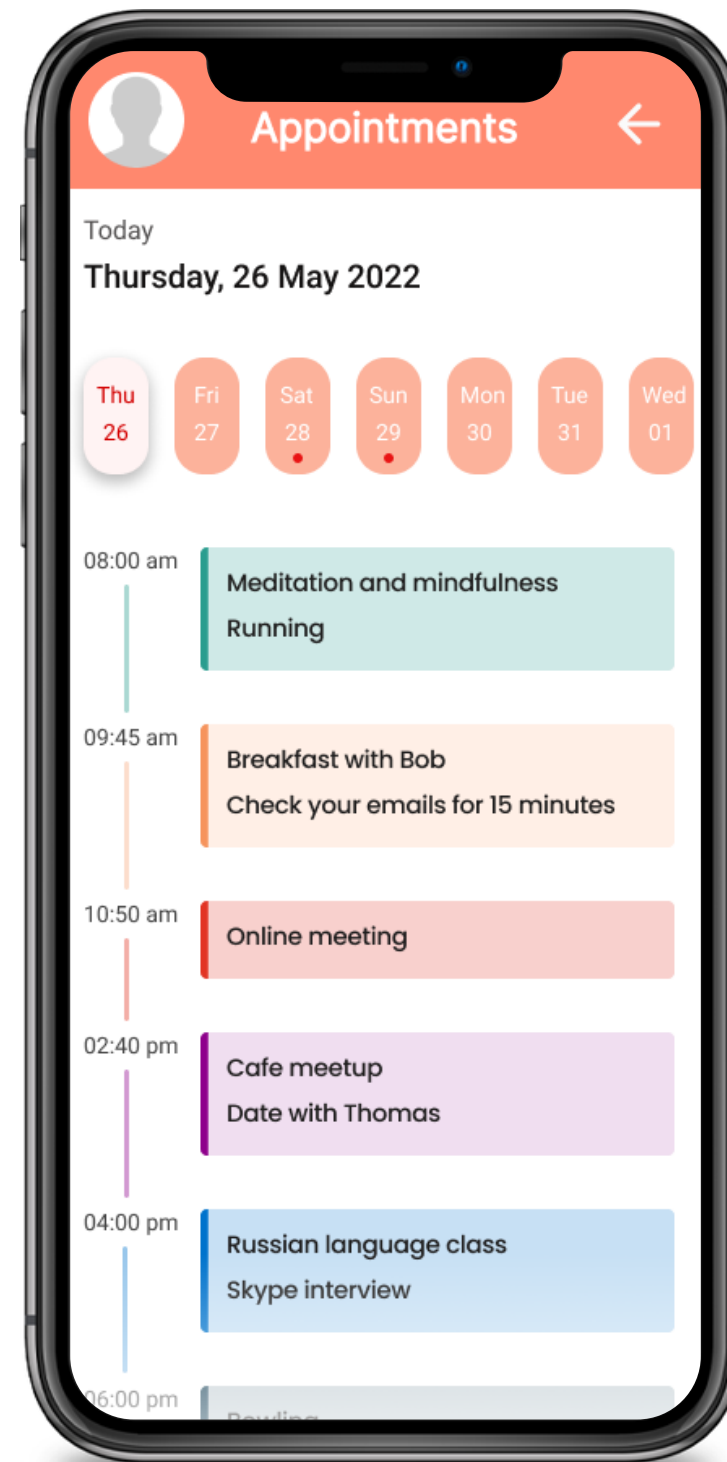

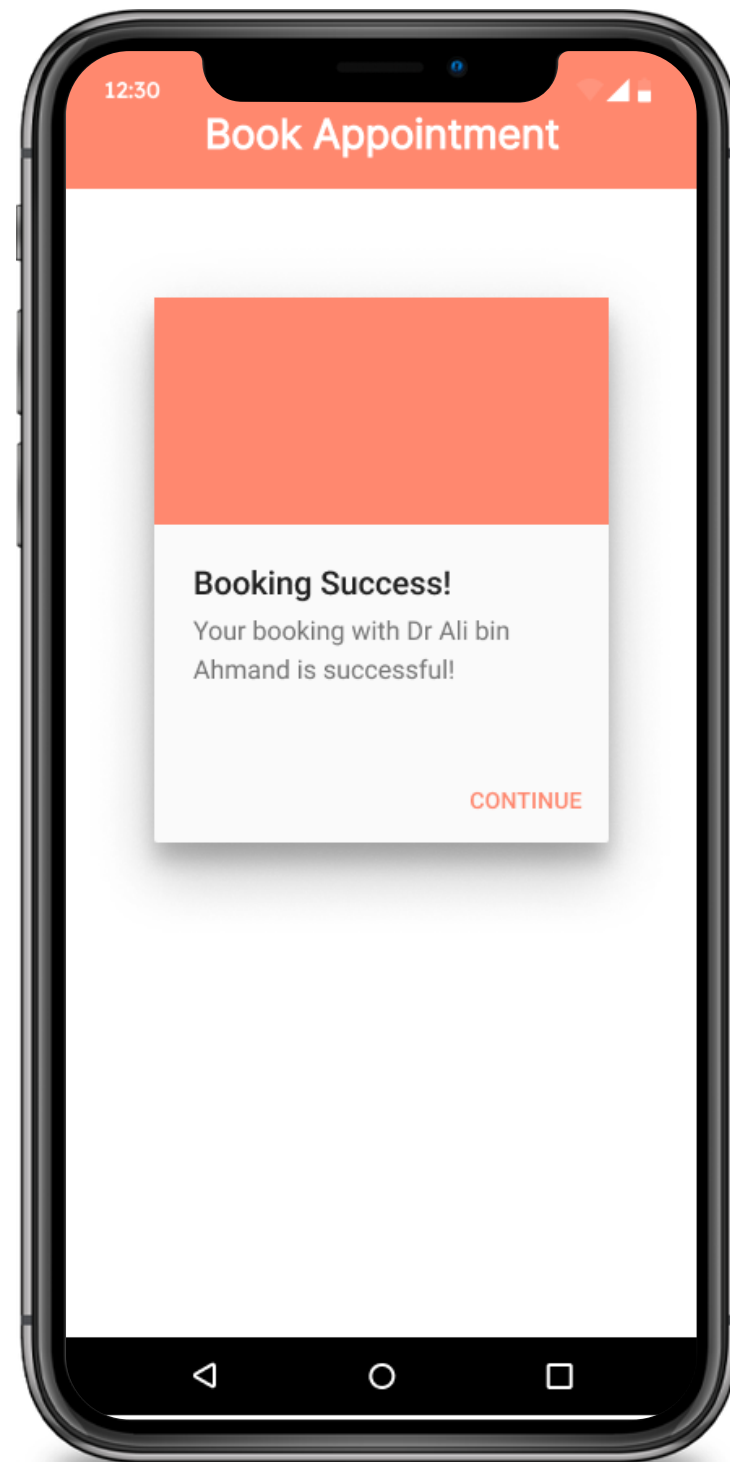

The Waterfall Method

Prototype

Demonstration

Conclusion

01 A mobile application - serves its purpose

02 Fully utilizes the current technologies

03 An enhanced medical service
